FOR IMMEDIATE RELEASE

DIGI-NET TECHNOLOGIES RELEASES DIGICHAT v4.0

Industry leading chat software unveils new features and upgrades

GAINESVILLE, FL, August 20, 2002 – Digi-Net Technologies, Inc., a leader in real-time messaging technology for e-commerce and community building applications, today announced the release of DigiChat v4.0.

DigiChat v4.0 combines the strength and reliability of the past award-winning versions with some new features that far exceed those offered by competing applications. The new version includes a completely redesigned interface and BOT support, which allows users to add functionality such as real-time language translation and local weather reports within the chat window with our open Java-based API. Other features include automated flood control, file transfer/sharing capabilities, support for webcast chat events and support for interface themes (skins).

“We are very excited with the continuing success of DigiChat,” said Robert Parker, President and CEO of Digi-Net. “DigiChat v4.0 is the culmination of years of experience in the community building arena and significant contributions and feedback from our customers.”

DigiChat is the market-share leader in Java™ chat software solutions. Its proven interface and rock solid stability and compatibility have led to more than ten thousand site licenses sold to date. DigiChat maintains versions for most platforms including Mac, Windows, 9x/NT/2000/XP, Linux, UNIX, Solaris and others. DigiChat v4.0 was designed to raise the bar for community-oriented chat applications.

“Digi-Net has developed some very solid products and DigiChat is an excellent example,” said Jon Deragon, Director of Visca Online. “I would highly recommend DigiChat to anyone wanting to add an affordable, stable and complete Java chat program to their site.”

DigiChat v4.0 features include:

- **BOT Support** – The open API (Application Programming Interface) allows users to add unique features and tools to DigiChat. The BOT API allows for virtually unlimited additional functionality such as:
 - Translate chat messages dynamically to foreign languages in real-time
 - Deliver local weather or latest stock quotes to the chat room
 - Retrieve user list and connection count for statistical purposes
 - Add interactive trivia and other games to your website
- **Enhanced/Automated Flood Control** – Automatically kick or ban users who flood and spam the chat room. Customizable flood control settings allow for customer specific criteria.
- **File Transfer** – Allows chatters to send files back and forth while they chat.
- **Redesigned/Customizable Theme Interface** – ‘Skinnable’ Interface can be completely customized with client images, backgrounds, fonts and colors via a drop-in theme support. All buttons and tabs can be replaced with custom images to seamlessly match the site's existing look and feel.

DigiChat is currently being used on a number of websites, including two sites developed by G&G Advertising for the U.S. Army National Guard. These websites are <http://www.1800goguard.com> and <http://www.Virtualarmory.com>.

DigiChat is also being used on the Jacksonville Jaguars website, which can be viewed at <http://www.jaguars.com>.

DigiChat is part of Digi-Net's community building suite that includes DigiPosts and Hubz, a bulletin board solution and a real-time population awareness tool, respectively.
